The Process

What you can expect from the team at ALL Save Energy!

1. **Upon the First Visit:** We will collect all the necessary information to Reverse Engineer a Solar Energy System for your home and go over it with you, making sure all your questions are answered before drawing up a contract.
 - a. All parties will sign the contract and you will then have 3 days to change your mind, after which time the deposit (if applicable) will be collected and your system design will be ordered.

2. **Day 4:** We will send out a Renewable Energy Expert to go over any last minute details with you, including any adjustments that had to be made by the design team in preparation for securing the permits for your System.
 - a. The Renewable Energy Expert will also conduct a Comprehensive Energy Usage Analysis, where they will identify energy saving ideas for future consideration.
 - i. The Energy Usage Analysis will utilize thermographic technology to reveal heat gain / loss, special meters to measure power consumption of larger equipment, and close visual inspection of insulation and fenestrations.
 - ii. Many of the suggestions will have rebates and tax incentives and will likely lower your power bill significantly.
 - b. At this time the Renewable Energy Expert will also install your LED light bulbs to help reduce your lighting costs by up to 75%, which lowers your overall electricity bill as much as 7.5%!

3. **Day 5:** Usually the “Authority Having Jurisdiction” will have your permit released by now, and pending availability of scheduling and materials, we will have equipment delivered to your property and commence installation.
 - a. Once we start work, we are usually completed within 2-3 business days, sometimes less.
 - b. We will then complete your final inspection, submit your “Interconnection Agreement” paperwork to your utility, and commission your system.
 - c. Accordingly we will request that you release funds as laid out in the contract.

4. **Day 15:** By this time you will have been granted “Permission to Operate” from the utility company, at which point our contract will be fulfilled and you will immediately start saving money through Net Energy Metering from the Power being produced by your new Solar Energy System!
